- Adjustable levelling feet to ensure that the scale is stable
- Hold and Tare functions to enable accurate and easy weighing
- Optional rucksack and carry case available for transportation
- Covered by the Marsden 4 year warranty

Multi-use Height Measure

The Marsden HM-80P is suitable for both babies and toddlers thanks to the simplistic design and easy to use sliders to adjust to the length of the infant.

With a max measuring range of 80cm, this height measure can accommodate a new-born up to 18-24 months of age, with a precise accuracy of only 1mm. Ideal for close monitoring.

Extreme accuracy

With 1mm increments, height stopper and red arrows for precision, the Marsden HM-80P is one of the most accurate height measures available on the market.

Whatever the height measurement is needed for, you can guarantee that it will be precise and accurate with the HM-80P. Highly popular with medical professionals and at home.

Easy to use

To use the height measure, simply lay the baby or toddler down on a safe, flat surface and position the HM-80P height measure around the infant.

Once the height measure and infant are both in the correct position, place one of the cursors level with the baby's head, then adjust the other cursor until it is level with their feet, their height will then be shown.

Measuring Range: 10cm - 80cm
